1. Positioning Statement

Recommended market position: Present Viva Electric & Solar Inc. as an “Insurance Electrical Compliance Specialist” rather than only as a general electrical contractor. This makes the service feel urgent, specialized, and easier for property owners, managers, and insurance brokers to understand.

Core Messaging

Audience	Main Message
Homeowners	If your insurer flagged your panel, Viva can inspect it, document deficiencies, complete the correction work, and help you keep coverage.
Property managers	We provide scalable inspections, compliance reports, corrections, and panel upgrades for single properties or full portfolios.
Insurance brokers	We give your insureds a fast path from notice to inspection to documented corrective action.
Apartment owners / investors	We handle insurance-driven electrical upgrades for multi-unit properties, including meter banks, service equipment, and phased scheduling.

Trust / Authority Block

- Licensed C-10 electrical contractor
- Experienced with service upgrades, panel replacements, meter-main equipment, solar coordination, and battery-related electrical reconfiguration
- Homeowner and multi-unit property support
- Permit and utility coordination available

3. FAQ Section

Why are insurance companies requiring panel replacements?

Insurance carriers are reducing risk associated with aging or unsafe electrical equipment. Older or defective panels may not trip properly, may show signs of overheating, or may no longer have reliable replacement parts. When a property presents a higher fire risk, insurers may require inspection, corrective work, or full replacement before issuing or renewing coverage.

Which panel brands are most often flagged?

Commonly flagged equipment can include Zinsco, Federal Pacific / Stab-Lok, Challenger, Pushmatic, and certain older Sylvania equipment. Final determination depends on the carrier, the condition of the equipment, and the overall installation. Viva can inspect the system and identify whether correction or full replacement is the better path.

How does this affect multi-unit apartment buildings?

Multi-unit properties are often evaluated more aggressively because a single electrical failure can affect multiple tenants and create greater liability. Carriers may require upgrades for multiple unit panels, main service equipment, meter banks, grounding and bonding, labeling, and other safety-related corrections.

What happens if I do not replace or correct the flagged equipment?

Possible outcomes include non-renewal, increased premiums, limited coverage options, delayed closing during a sale, or pressure to move into a higher-cost insurance product. Addressing the electrical issue quickly protects the property and improves insurability.

Will replacing my panel lower my insurance premium?

The main benefit is improved insurability and elimination of a major underwriting concern. Premium reductions are not guaranteed, but updated equipment can help remove a high-risk classification and support continued coverage.

How long does a panel upgrade take?

A straightforward single-family panel replacement may be completed in one working day once permits, utility coordination, and materials are ready. Multi-unit or service-equipment projects may take several days or be scheduled in phases depending on access, tenant coordination, utility requirements, and inspection scheduling.

Do you handle permits and inspections?

Yes. Viva can assist with permitting, inspection scheduling, and coordination with the serving utility and local jurisdiction, subject to project scope and utility process.

Can you replace multiple panels at once for better pricing?

Yes. Viva can structure phased work and volume pricing for apartment owners, property managers, and investors with multiple units or multiple properties.

What is the first step if I receive a notice from my insurer?

Send the notice and basic property information, schedule an inspection, and let Viva determine whether the issue can be solved with documentation and corrective work or whether full replacement is needed. Early action reduces pressure and helps avoid missed deadlines.

6. Email Outreach Templates

Property Manager Outreach

Subject: Electrical insurance compliance support for your properties

Hello [Name],

Viva Electric & Solar Inc. is helping California property owners address insurance-driven electrical panel issues. If any of your buildings have received notices related to outdated or unsafe electrical equipment, we can provide inspections, written findings, corrective work, and panel or service upgrades.

We support homeowners, apartment owners, and multi-unit properties, and we can discuss phased work for multiple panels or multiple properties.

If useful, I would be glad to schedule a quick call or site visit.

Thank you,

Roberto Valle O.

Insurance Broker Outreach

Subject: Electrical contractor resource for insureds with panel notices

Hello [Name],

I wanted to introduce Viva Electric & Solar Inc. as a resource for clients who receive insurance notices related to electrical panels or other electrical safety concerns. We provide inspections, documentation, corrective work, and full panel upgrades where required.

Our goal is to help insureds move quickly and professionally from notice to completed electrical work so they can address underwriting concerns without unnecessary delay.

If you would like, I can send over our inspection overview and contact details for easy referral.

Best regards,

Roberto Valle O.

Viva Electric & Solar Inc.

7. Call Script

- Opening: Hello, this is Roberto with Viva Electric & Solar Inc. We are reaching out because more property owners are receiving insurance notices related to older electrical panels, and we help with inspections, corrective work, and upgrades.
- Qualifying question 1: Have any of your properties received a panel-related insurance notice or underwriting request?
- Qualifying question 2: Are you dealing with a single property or multiple units / multiple buildings?
- Value statement: We can inspect the equipment, identify whether correction or replacement is needed, and help move the project through permits, utility coordination, and completion.

- Close: Would it be helpful to schedule a site visit or quick call to review the property and discuss next steps?

8. Inspection Offer & Pricing Framework

Service Level	Suggested Positioning	Pricing Placeholder
Tier 1 – Inspection	Visual inspection, photos, summary findings, next-step recommendation	\$550+ per panel / property
Tier 2 – Corrective Work	Breaker corrections, grounding / bonding corrections, labeling, other minor code-related fixes where appropriate	\$550+ based on findings
Tier 3 – Panel / Service Upgrade	Full replacement of panel or service equipment, permit and utility coordination, final inspection	\$550+ per unit / scope
Tier 4 – Multi-Unit Program	Portfolio or apartment pricing with phased scheduling and volume structure	\$550+ custom proposal

9. Intake Checklist

- Client name and best contact information
- Property address and property type
- Insurance notice or underwriting letter, if available
- Photos of existing panel(s), meter, and surrounding area
- Known panel brand and service size, if known
- Number of units / number of panels for multi-unit properties
- Deadline given by insurer, if any
- Whether solar, battery, EV charging, or major HVAC loads are present

10. Implementation Notes

- Use the landing page copy as a dedicated page on the Viva website focused only on insurance electrical compliance.
- Use the flyer for print handouts, email attachments, and leave-behinds with property managers and brokers.
- Use the outreach emails weekly to build referral relationships with property managers, insurance brokers, and real-estate professionals.
- Keep one inspection checklist and one clean proposal template ready so every lead moves through the same process.
- Add before-and-after project photos once available to strengthen credibility and improve conversion.

Recommended next move: put this on the website as a dedicated landing page, turn the flyer into a

branded one-page leave-behind, and start outreach to property managers and insurance brokers using the templates in this package.
